

Howdoo iOS Test Task

Load the data from this JSON and display them in according to the detail. This list should be scrollable. Scrolling down will show more items. Tapping anywhere on the item (image, price, food text, etc - not just “see detail”) should lead to the detail page.

Images in the JSON are all in a different aspect ratio. The app must crop them to make it look “good” - use any method for this, no specific requirements.

JSON url:

https://gist.githubusercontent.com/gonchs/b657e6043e17482cae77a633d78f8e83/raw/7654c0db94a3f430888fac0caac675c7e811030a/test_data.json

Don’t hardcode the JSON into the app. It must be loaded from the remote URL on each app start.

The app must replicate the design as closely as possible - use the same fonts, font sizes, colors, distances between elements, etc.

Detail screen

The detail page should only display the restaurant name of the item that was just tapped, top bar and have a “Done” button which will lead back. Nothing else.
